This book gathers outstanding research papers presented at the 5th International Joint Conference on Advances in Computational Intelligence (IJCACI 2021), held online during October 23–24, 2021. IJCACI 2021 is jointly organized by Jahangirnagar University (JU), Bangladesh, and South Asian University (SAU), India. The book presents the novel contributions in areas of computational intelligence and it serves as a reference material for advance research. The topics covered are collective intelligence, soft computing, optimization, cloud computing, machine learning, intelligent software, robotics, data science, data security, big data analytics, and signal and natural language processing. This book constitutes the proceedings of the 12th International Workshop on Knowledge Management and Acquisition for Intelligent Systems, PKAW 2012, held in Kuching, Malaysia, in September 2012. The 21 full papers and 11 short papers included in this volume were carefully reviewed and selected from 141 papers. They deal with knowledge acquisition issues and evaluation; language, text and image processing; incremental knowledge acquisition; agent based knowledge acquisition and management; ontology-based approaches; WEB 2.0 methods and applications; and other applications. Wave breaking represents one of the most interesting and challenging problems for fluid mechanics and physical oceanography. Over the last 15 years our understanding has undergone a dramatic leap forward, and wave breaking has emerged

as a process whose physics is clarified and quantified. Ocean wave breaking plays the primary role in the air-sea exchange of momentum, mass and heat, and it is of significant importance for ocean remote sensing, coastal and ocean engineering, navigation and other practical applications. This book outlines the state of the art in our understanding of wave breaking and presents the main outstanding problems. It is a valuable resource for anyone interested in this topic: researchers, modellers, forecasters, engineers and graduate students in physical oceanography, meteorology and ocean engineering.

Windows 8.1 continues the evolution of the most radical redesign in Microsoft's history. It combines the familiar Windows desktop with a new, touchscreen-friendly world of tiles and full-screen apps. Luckily, David Pogue is back to help you make sense of it?with humor, authority, and 500 illustrations. The important stuff you need to know: What's new in 8.1. The update to 8.1 offers new apps, a universal Search, the return of the Start menu, and several zillion other nips and tucks. New features. Storage Spaces, Windows To Go, File Histories?if Microsoft wrote it, this book covers it. Security. Protect your PC from viruses, spyware, spam, sick hard drives, and out-of-control kids. The network. HomeGroups, connecting from the road, mail, Web, music streaming among PCs?this book has your network covered. The software. Media Center, Photo Gallery, Internet Explorer, speech recognition?this one authoritative, witty guide makes it all crystal clear. It's the book that should have been in the box. Provides an understanding of Web search engines from the unique perspective of Library and Information Science. This book explores a range of topics including retrieval effectiveness, user satisfaction, the evaluation of search interfaces, the impact of search on society, and the influence of search engine optimization (SEO) on results quality. This book constitutes the refereed proceedings of the 4th International Conference, EsTAL 2004, held in Alicante, Spain in October 2004. The 42 revised full papers presented were carefully

reviewed and selected from 72 submissions. The papers address current issues in computational linguistics and monolingual and multilingual intelligent language processing and applications, in particular written language analysis and generation; pragmatics, discourse, semantics, syntax, and morphology; lexical resources; word sense disambiguation; linguistic, mathematical, and morphology; lexical resources; word sense disambiguation; linguistic, mathematical, and psychological models of language; knowledge acquisition and representation; corpus-based and statistical language modeling; machine translation and translation tools; and computational lexicography; information retrieval; extraction and question answering; automatic summarization; document categorization; natural language interfaces; and dialogue systems and evaluation of systems. Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition, it includes 17 new chapters on subjects such as semantic role-labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis, and the application of Natural Language Processing in educational and biomedical contexts, among many others. The volume is divided into four parts that examine, respectively: the linguistic fundamentals of computational linguistics; the methods and resources used, such as statistical modelling, machine learning, and corpus annotation; key language processing tasks including text segmentation, anaphora resolution, and speech recognition; and the major applications of Natural Language Processing, from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing, as well as those working in related industries. An excellent Guide of tagging. There has never been a tagging Guide like this. It contains 89 answers, much more than you can imagine; comprehensive

answers and extensive details and references, with insights that have never before been offered in print. Get the information you need-- fast! This all-embracing guide offers a thorough view of key knowledge and detailed insight. This Guide introduces what you want to know about tagging. A quick look inside of some of the subjects covered: Electronic article surveillance - Source tagging, Criticism of Facebook - Photo recognition and face tagging, Plural - POS tagging, Mobile tagging - Codes and readers, Part of speech tagging - Unsupervised taggers, Defective by Design - Tagging campaign, Geotagging - GPS formats, Mobile tagging - Commercial tagging, Part of speech tagging - Use of Hidden Markov Models, Knowledge tagging, Part of speech tagging - Issues, Geotagging - Dangers of geotagging, Fire stop - Tagging, Geotagging - Geotagging in tag-based systems, Knowledge tagging - Knowledge tags, Mobile tagging - History, Knowledge tagging - In research, Electronic tagging, Geotagging - Geotagging photos, Geotagging - DNS entries, Electronic tagging - In the United Kingdom, Electronic tagging - Background, Geotagging - Geoblogging, Item level tagging, Geotagging - SMS messages, Diatoms - Expressed sequence tagging, British National Corpus - Tagging, ATunes - Tagging, Part-of-speech tagging, Magnum Photos - Crowdsourcing tagging, 802.1q - Double tagging, Geotagging - ICBM method, Radio music ripping - Manual tagging, Geotagging - Microformat, Geotagging - RDF feeds, Mobile tagging - Public tagging, Item level tagging - Benefits, Part of speech tagging - Other taggers and methods, VLAN hopping - Double tagging, Rylene dye - Protein Tagging, and much more... This book constitutes the thoroughly refereed post-conference proceedings of the First International Conference, UCMedia 2009, which was held on 9-11 December 2009 at Hotel Novotel Venezia Mestre Castellana in Venice, Italy. The conference`s focus was on forms and production, delivery, access, discovery and consumption of user centric media. After a thorough review process of the papers received, 23 were accepted

from open call for the main conference and 20 papers for the workshops. The Cambridge Handbook of English Corpus Linguistics (CHECL) surveys the breadth of corpus-based linguistic research on English, including chapters on collocations, phraseology, grammatical variation, historical change, and the description of registers and dialects. The most innovative aspects of the CHECL are its emphasis on critical discussion, its explicit evaluation of the state of the art in each sub-discipline, and the inclusion of empirical case studies. While each chapter includes a broad survey of previous research, the primary focus is on a detailed description of the most important corpus-based studies in this area, with discussion of what those studies found, and why they are important. Each chapter also includes a critical discussion of the corpus-based methods employed for research in this area, as well as an explicit summary of new findings and discoveries.

ABOUT THIS BOOK This book is intended for researchers who want to keep abreast of current developments in corpus-based natural language processing. It is not meant as an introduction to this field; for readers who need one, several entry-level texts are available, including those of (Church and Mercer, 1993; Charniak, 1993; Jelinek, 1997). This book captures the essence of a series of highly successful workshops held in the last few years. The response in 1993 to the initial Workshop on Very Large Corpora (Columbus, Ohio) was so enthusiastic that we were encouraged to make it an annual event. The following year, we staged the Second Workshop on Very Large Corpora in Kyoto. As a way of managing these annual workshops, we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics. The demand for international forums on corpus-based NLP has been expanding so rapidly that in 1995 SIGDAT was led to organize not only the Third Workshop on Very Large Corpora (Cambridge, Mass.) but also a complementary workshop entitled From Texts to Tags (Dublin). Obviously, the success of these

workshops was in some measure a reflection of the growing popularity of corpus-based methods in the NLP community. But first and foremost, it was due to the fact that the workshops attracted so many high-quality papers. Contents of this U.S. Army Field Manual: (1) Military Intelligence Missions and Intelligence Preparation of the Battlefield; (2) Composition and Structure; (3) The Interrogation Process; (4) Processing and Exploiting Captured Enemy Documents. Appendices: (A): Uniform Code of Military Justice Extract; (B) Questioning Guides; (C) S2 Tactical Questioning Guide and Battlefield Exploitation of Captured Enemy Documents and Equipment; (D) Protected Persons Rights Versus Security Needs; (E) Reports; (F) Command Language Program; (G) Individual and Collective Training. Glossary. Charts and tables. This proceeding discuss the latest solutions, scientific findings and methods for solving intriguing problems in the fields of data mining, computational intelligence, big data analytics, and soft computing. This gathers outstanding papers from the fifth International Conference on “Computational Intelligence in Data Mining” (ICCIDM), and offer a “sneak preview” of the strengths and weaknesses of trending applications, together with exciting advances in computational intelligence, data mining, and related fields. Want to use an Adobe tool to design animated web graphics that work on iPhone and iPad? You’ve come to the right book. Adobe Edge Preview 3: The Missing Manual shows you how to build HTML5 graphics using simple visual tools. No programming experience? No problem. Adobe Edge writes the underlying code for you. With this eBook, you’ll be designing great-looking web elements in no time. Get to know the workspace. Learn how Adobe Edge Preview 3 performs its magic. Create and import graphics. Make drawings with Edge’s tools, or use art you designed in other programs. Work with text. Build menus, label buttons, provide instructions, and perform other tasks. Jump into animation. Master Edge’s elements, properties, and timeline panels. Make it

interactive. Use triggers and actions to give users control over their web experience. Peek behind the curtain. Understand how HTML and CSS documents work. Dig into JavaScript. Customize your projects by tweaking your code. Bestselling author Chris Grover has more than 25 years experience in graphic design and electronic media. He excels in making complex technology fun and easy to learn. In *Adobe Edge Preview 3: The Missing Manual*, he continues the winning formula of *Flash CS5.5: The Missing Manual* and *Google SketchUp: The Missing Manual*. This book covers computationally innovative methods and technologies including data collection and elicitation, data processing, data analysis, data visualizations, and data presentation. It explores how digital humanists have harnessed the hypersociality and social technologies, benefited from the open-source sharing not only of data but of code, and made technological capabilities a critical part of humanities work. Chapters are written by researchers from around the world, bringing perspectives from diverse fields and subject areas. The respective authors describe their work, their research, and their learning. Topics include semantic web for cultural heritage valorization, machine learning for parody detection by classification, psychological text analysis, crowdsourcing imagery coding in natural disasters, and creating inheritable digital codebooks. Designed for researchers and academics, this book is suitable for those interested in methodologies and analytics that can be applied in literature, history, philosophy, linguistics, and related disciplines. Professionals such as librarians, archivists, and historians will also find the content informative and instructive. This book constitutes the refereed proceedings of the 11th International Conference on Asian Digital Libraries (ICADL 2008) held in Bali, Indonesia, in December 2008. The objective of this conference series is to provide a forum for presentation of high-quality research in the field of digital libraries. ICADL 2008 provided an opportunity for digital libraries researchers and practitioners in the Asia Pacific

area and beyond to gather to explore ideas, exchange and share experiences, and further build the research network in this region. ICADL 2008 was a truly international event, with presenters from 21 countries. A total of 63 papers were accepted for inclusion in the proceedings: 30 full papers, 20 short papers, and extended abstracts of 13 posters. Submissions were subject to a rigorous, blind peer-review process. The research topics cover the spectrum of digital libraries, including multimedia digital libraries, usability and evaluation, information retrieval, ontologies, social tagging, metadata issues, multi- and cross-language retrieval, digital preservation, scholarly publishing and communities, and more. Additionally, three tutorials were offered in association with the conference by Andreas Rauber (Vienna University of Technology), David Bainbridge (University of Waikato), and George Buchanan (Swansea University). Tagging with coded wire tags (CWT) is the most common marking method used for studies of Pacific salmon released from hatcheries. CWTs can also be used in studies of wild stocks to estimate harvest, total adult production (harvest plus escapement), exploitation rates, smolt production, marine survival or return rates, and spawner-recruit relationships. This manual documents what we have learned in over 25 years of working with coded wire tags and wild salmon in lakes, streams and rivers in Alaska. We hope it will be a practical and useful tool in the planning and operation of similar projects with tips on what has worked and not worked for us over the years. It will also be a citable reference for methods in future reports. Also included is an annotated bibliography of references on related subjects and links to useful websites. For project planning, we have also included an appendix listing sources of some of the specialized equipment used in these projects.

Foreword----- SGML is misunderstood and underestimated. I have always wanted to write this book. I am pleased that two people with whom I have had the pleasure to work were finally able to do so. Since I have always

been a bit of an evangelist, I feel pride when my "students" become recognized "teachers". In the early years of SGML we struggled to define a language that would bring the information to its rightful place. We succeeded. Then we had to explain these idea to technical adoptors. Again, I think we have succeeded. We have learned much about SGML in the process of implementing it. These experiences must now also be shared, along with comprehensible information on the lan guage itself. The word must move out of the lab and the computer center and reach the business people, the users, the movers and shakers. The next generation will do things with SGML that we can't even imagine yet- it is that versatile. Previous ed.: published as Wildlife radio tagging, 1987. Intended to be of interest to counter-terrorism experts and professionals, to academic researchers in information systems, computer science, political science, and public policy, and to graduate students in these areas, this book highlights several aspects of patrolling the Web that were raised and discussed by experts from different disciplines. This book constitutes the refereed proceedings of the 6 th International Conference on Knowledge Science, Engineering and Management, KSEM 2013, held in Dalian City, China, in August 2013. The 50 revised papers (33 regular papers, 18 short papers, and keynote and invited talks) were carefully reviewed and selected from various submissions. LC copy bound in 2 v.: v. 1, p. 1-509; v. 2, p. [509]-1153. This book contains the thoroughly refereed and revised best papers from the 9th International Conference on Web Information Systems and Technologies, WEBIST 2013, held in Aachen, Germany, in May 2013, organized by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), and co-organized by the RWTH Aachen University. The 15 papers presented in this book were carefully reviewed and selected from 143 submissions. The papers were selected from those with the best reviews also taking into account the quality of their presentation at the conference. The papers are grouped into parts on Internet

technology, Web interfaces and applications, society, e-business and e-government, Web intelligence, and mobile information systems. This book constitutes the refereed proceedings of the 7th Mexican Conference on Pattern Recognition, MCP R 2015, held in Mexico City Mexico, in June 2015. The 30 revised full papers presented were carefully reviewed and selected from 63 submissions. The papers are organized in topical sections on pattern recognition and artificial intelligence; image processing and analysis; robotics and computer vision; natural language processing and recognition; and applications of pattern recognition. This volume constitutes the refereed proceedings of the following 9 international workshops: OTM Academy, OTM Industry Case Studies Program, Cloud and Trusted Computing, C&TC, Enterprise Integration, Interoperability, and Networking, EI2N, Industrial and Business Applications of Semantic Web Technologies, INBAST, Information Systems, om Distributed Environment, ISDE, Methods, Evaluation, Tools and Applications for the Creation and Consumption of Structured Data for the e-Society, META4eS, Mobile and Social Computing for collaborative interactions, MSC, and Ontology Content, OnToContent 2014. These workshops were held as associated events at OTM 2014, the federated conferences "On The Move Towards Meaningful Internet Systems and Ubiquitous Computing", in Amantea, Italy, in October 2014. The 56 full papers presented together with 8 short papers, 6 posters and 5 keynotes were carefully reviewed and selected from a total of 96 submissions. The focus of the workshops were on the following subjects models for interoperable infrastructures, applications, privacy and access control, reliability and performance, cloud and configuration management, interoperability in (System-of-)Systems, distributed information systems applications, architecture and process in distributed information system, distributed information system development and operational environment, ontology is use for eSociety, knowledge management and applications for eSociety,

social networks and social services, social and mobile intelligence, and multimodal interaction and collaboration. Dreamweaver CS6 is the most capable website design and management program yet, but there's no printed guide to its amazing features. That's where Dreamweaver CS6: The Missing Manual comes in. You'll learn to use every facet of this versatile program, through jargon-free explanations and 13 hands-on tutorials. The important stuff you need to know: Get A to Z guidance. Go from building simple web pages to creating rich, interactive websites. Learn state-of-the-art design. Create dynamic, visually appealing sites using JavaScript and CSS, and see how HTML5 and CSS3 fit in. Add instant interactivity. Use Dreamweaver's unique Spry technology to easily add complex layout options, like drop-down menus. Use timesaving features. Take advantage of Dreamweaver's libraries, templates, and hundreds of extensions. Go mobile. Design sites for smartphones, tablets, and desktop PCs, using the same HTML. Simplify site management. Check for broken links, streamline site-wide changes, and reorganize your site in a snap.
