"This manual developed as a condensed revision of the second edition of Nursing care of the critically ill child"--Preface. Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists, and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures – not only the items themselves, but also the oppositions between them – reflect the fact that neither the notions of space, time, person nor our use of them are identical cross-culturally. This diversity is not restricted to the difference between languages, but also appears among related dialects and language varieties. This volume will provide an overview of the field, focusing on Romance languages, but also reaching beyond this perspective. Chapters on diachronic developments (language change), comparisons with other (non-)European languages, and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers, regardless of their familiarity with Romance languages, will gain new insights into deixis in general, and into the similarities and differences among deictic structures used in the languages of the world. "As Book 7 opens, things are looking good for the Athenians in Sicily. It is summer 414 bce, and they have been there for a year. Book 6 described the important decision taken in Athens a year before. At that point an uneasy peace had prevailed since 421, an interval in the 'Peloponnesian War', as we now call it, that had broken out between Athens and Sparta in 431 and would last till 404. It was clear in spring 415 that there were still dangers at home, for Sparta was anything but friendly and many of its allies, Corinth and Thebes in particular, were still fiercer enemies of Athens; any resumption of hostilities would be welcome to them. Still, the prospect of an expedition to Sicily was an attractive one. The immediate prompt was a call from Athens' ally Segesta in western Sicily for support against their neighbour Selinus, but it was clear that the real enemy would be Selinus' ally Syracuse: The trust explanation was that the Athenians wished to rule all Sicily, and at the same time they wished to help their own kinsmen and the additional allies that had accrued. (6.6.1) 'To rule all Sicily': a big ambition, indeed, and one that had been in Athenian minds for some time (3.86.4). Not everyone was keen; one of the least enthusiastic was Nicias, who tried to argue the Athenians out of it even once the decision had been taken (6.9-14). But the charismatic Alcibiades spoke in its favour (6.16-18), and a further ploy of Nicias badly misfired. If the Athenians were to go at all, he said, they needed to go in greater numbers (6.20-3). He pitched the figures so high in the hope that this would put them off; in fact it had the opposite effect:"-- This book is an excellent supplementary textbook, written in simple language and easy to understand even for beginners. All topics related to microbiology are covered - general aspects like techniques, culture and identification of bacteria, bacterial genetics, water, soil and food microbiology and the study of viruses and fungi. It is a very special honour for me to be able to present this handbook of medical oncology, which under diverse headings and origins covers such a vast spectrum of experience. I believe the reader will be struck in particular by the impressive volume of information available, especially with regard to childhood tumours, which represent, today, an immense "lab oratory of hope". It is in this very field that we oncologists have been able to obtain the most consoling results in recent years. I feel sure that all those who read these chapters will find that their oncological competence is enriched and also in a certain sense that their wish to contribute to progress in cancer research and treatment has been renewed. In conclusion, my most heartfelt congratulations go to the authors for the excellent job they have done, as well as my admiration for having been able to concentrate so much precious and innovative information into so little space.
